

Sure Seal[™]

Solidification and Loss Circulation Material

Description:

Sure Seal is a granular, advanced super-absorbent material that rapidly absorbs and retains large volumes of water from aqueous solutions. Sure Seal[™] will absorb 7 to 10 times its weight but only expand 1% in volume.

Recommended Use:

Sure Seal is ideally suited as an additive for sealing and stabilization of slurry fluids. Sure Seal[™] is also a superior lost circulation material. Add Sure Seal to a slurry excavation to prevent fluid loss.

Characteristics:

- Seals large and fine fractures and highly permeable and porous formations.
- Absorbs 100 times its own weight in water.

Mixing and Applications:

Add 8-10 lbs. per 1000 gallons liquid.

Loss circulation..... pour pail directly into the drilled excavation around the circumference of the shaft. Place drilling tool just above the bottom of the shaft and rotate slowly allowing time for Sure-Seal[™] to settle and expand before proceeding with drilling.

Packaging:

15 lb. pail, 48 pails per pallet. All pallets are plastic-wrapped.
